

Installation and Assembly

Ensure careful handling during installation and operation.

Supply Voltage

The supply voltage is daisy-chained from the supply port (terminal 1) to the sensor port (terminal 2), i.e., the supply voltage must match that of the sensor. Positive voltage must be between 9 V and 36 V.

➔ Connect the inputs V+ and ⊥ on terminal 1 to a voltage supply. Maximum cable length 3 m.

MICRO-EPSILON recommends using the optionally available power supply PS2020.

Cable Termination at Interface

Ensure correct cable termination for an RS485 bus or RS422 bus! The IF2035-EIP works as a master for both interfaces; internally, a 120 Ohm terminating resistor has already been permanently incorporated. The IF2035-EIP should be at the bus start.

Connection Options

Sensor/Controller	Cable	RS485	RS422	Cable	Sensor/Controller
ACC5703	PCx/8-M12			CAB-M9-5P-St-ge; xm-PVC-RS422	ACS7000
DT6120	SCAC3/6			SC2471-x/RS422/OE	IFD242x, IFD246x
INC5701	PCx/8-M12			Direct or PCF1420-x/I/U	ILD1x20
MSC7xxx	PC7400-6/4			PC1700-x/OE	ILD1750
DTD	PC5/5-IWT			PC1900-x/OE	ILD19x0
				PC2300-x/OE	ILD2300
				PC2250-x	ILR2250
				CAB-M12-8P-St-ge	MFA-7/14/21/28
				PC/SC2520-x	ODC2520

RS422	
IF2035-EIP	Sensor/Controller
T+	R+
T-	R-
R+	T+
R-	T-
⊥	Cable shield

The length of the cable between IF2035-EIP and sensor/controller is 10 m at most. Because of the PCx/8-M12 cable, the sensor supply for ACC5703 and INC5701 sensors is possible only via the IF2035-EIP.

Intended Use

The IF2035-EIP interface module is designed for use in industrial and laboratory applications. It is used to convert the internal MICRO-EPSILON sensor protocol (RS485, RS422) to EtherNet/IP™.

The interface module must only be operated within the limits specified in the technical data. The interface module must be used in such a way that no persons are endangered or machines and other material goods are damaged in the event of malfunction or total failure of the sensor/controller. Take additional precautions for safety and damage prevention in case of safety-related applications.

Warnings

Connect the power supply and the display/output device according to the safety regulations for electrical equipment.

- > Risk of injury
- > Damage to or destruction of the interface module

The supply voltage must not exceed the specified limits.

- > Damage to or destruction of the interface module

Avoid shocks and impacts to the interface module.

- > Damage to or destruction of the interface module

Proper Environment

Protection class:	IP 20
Operating temperature:	0 ... +50 °C (+32 ... +122 °F)
Storage temperature:	-20 ... +70 °C (-4 ... 158 °F)
Humidity:	5 - 95% (non-condensing)
Ambient pressure:	Atmospheric pressure

Pin Assignment

Terminal 2	
V+	Supply voltage ¹
⊥	Ground for supply voltage
M1	Multifunction input 1
M2	Multifunction input 2
Terminal 1 connections daisy-chained	

Terminal 1	
V+	Supply voltage ¹
⊥	Ground for supply voltage
M1	Multifunction input 1
M2	Multifunction input 2
Terminal 2 connections daisy-chained	

1) If the distance between IF2035-EIP and the sensor/controller is long, a separate supply for the sensor/controller may be advisable.

Terminal 4	
T+	RS422 Tx+
T-	RS422 Tx-
R+	RS422 Rx+
R-	RS422 Rx-
⊥	Ground ² e.g., for RS422 shield connection

Terminal 3	
A	RS485 A
B	RS485 B
S+	Synchronization output +
S-	Synchronization output -
⊥	Ground ² e.g., for RS485 shield connection

2) Internally connected to supply ground

Quick Guide

Configuring the Sensor Interface

Only sensors (controllers) that support the ME sensor protocol can be connected via RS485/RS422. Micro-Epsilon recommends selecting the corresponding sensor interface via the web interface of the sensor (controller).

Baud Rate

There is no automatic baud rate matching between IF2035-EIP and the connected sensor (controller). MICRO-EPSILON recommends selecting the corresponding baud rate via the web interface of the sensor (controller).

Data Format

All configuration parameters and data are transmitted in Little Endian format.

Sensors/controllers with RS485: cyclical data are transmitted via the fieldbus without change, i.e., as a binary block as described and supplied by the sensor.

Sensors/controllers with RS422: cyclical data are decoded, i.e., a 4th byte is added to the 3 bytes and then transmitted.

Baud Rate and Sensor Interface

Option 1: MSG Command

An MSG command is configured as follows:

➔ Click the button  .

➔ Click the **Configuration** tab and set type **CIP Generic** as **Message Type**.

The following **Service Types** are possible:

- Get Attribute Single or
- Set Attribute Single.

➔ Click the **Communication** tab and select the target device using the **Browse** button in the **Path** field.

➔ Click the **Tag** tab and assign an element name in the **Name** field.

Nothing needs to be set here. The Message Configuration dialog is only available if a tag of type **Message** had been previously entered in the **MSG** element. In the example above, **m1** was chosen for this purpose.

Option 2: External Software

IF2035-EIP can also be configured beyond the PLC (e. g., with a software tool) by using EtherNet/IP™ Explicit Messaging.

The software used for this purpose must support the following services:

- 0x0E - Get Attribute Single as well as
- 0x10 - Set Attribute Single.

Service, Repair

Please send us the affected parts for repair or exchange.

If the cause of a fault cannot be clearly identified, please send the entire measuring system to:

Decommissioning, Disposal

➔ Remove all cables from the interface module.

Incorrect disposal may cause harm to the environment.

➔ Dispose of the device, its components and accessories as well as the packaging materials in compliance with the applicable country-specific waste treatment and disposal regulations of the region of use.
