Advantages and special features

scanCONTROL

Compact size and integrated evaluation without external controller or IPC

High profile resolution for the detection of finest details

High profile rate for dynamic measurement tasks

Made / Developed in Germany

Numerous references worldwide

Proven high operational safety in the 24/7 operation over many years

Compact. Powerful. Integrable.

Laser profile scanners from Micro-Epsilon are among the highest performing profile sensors with respect to accuracy and measuring rate. Equipped with powerful processors and highly sensitive optical components, these scanners ensure precise profile measurements on almost any type of surface.

While they can be integrated in various environments, the scanners also impress with their compact design which includes an integrated controller.

Universal Application

- Comprehensive scanner portfolio for transmission of profiles or measured values in industrial measurement tasks
- 2D inline measurement of different parameters (gap, step, radius, circle)
- 3D data and images for image processing
- Also suitable for robots & multi-sensor applications

Integrated Controller for Direct Processing

scanCONTROL laser scanners have an integrated controller and therefore do not require any external control unit. This considerably simplifies wiring and their integration into restricted spaces or on a robot. The available interfaces allow the scanners to be integrated in industrial environments. For multi-scanner applications, interface modules are available.

Real Time Surface Compensation

Dynamic adaption to rapidly changing surfaces

Laser profile scanners use diffusely reflected laser light of which the intensity is highly dependent on the color and how shiny and reflective the respective component is. In order to be able to measure reliably under rapidly changing conditions, scanCONTROL sensors offer the Real-Time-Surface-Compensation feature. Due to this smart feature, the exposure time and the threshold of reflection detection are adapted in real time in order to generate stable measurement results. Moreover, the scanCONTROL 3000 series comes with an HDR function which ensures accurate detection of inhomogeneous surfaces.

Red and Blue Laser

Laser scanners from Micro-Epsilon are available with red and blue laser. For common measurement tasks, scanCONTROL laser scanners with red laser line are used. With objects into which the laser light penetrates, such as transparent or organic surfaces, blue laser scanners are recommended. Blue Laser scanners are also ideal for red-hot glowing metals.

Patent Protection

for red-hot glowing and transparent objects

The internationally patented measurement methods for Blue Laser Technology allow precise measurements to be made on transparent or red-hot glowing objects above 700 °C.

Transparent objects include plastics, glass, adhesives, silicones, paints, coatings, Plexiglas and seals. Any questions about Blue Laser scanners? We will be pleased to advise you.

Measuring principle scanCONTROL

The principle of laser line triangulation

Laser scanners – often referred to as profile sensors – use the laser triangulation principle for two-dimensional profile detection on different target surfaces. By using special lenses, a laser beam is enlarged to form a static laser line and is projected onto the target surface. The receiving optics projects the diffusely reflected light of this laser line onto a highly sensitive sensor matrix. In addition to distance information (z-axis), the controller also uses this camera image to calculate the position along the laser line (x-axis). These measured values are subsequently output in a two-dimensional coordinate system that is fixed with respect to the sensor. In the case of moving objects or a traversing sensor, it is therefore possible to obtain 3D measurement values.

Laser line
Projecting a laser line onto the target surface

Sensor matrix (pixels)
Diffuse reflected light of the laser line is registered by a high quality sensor array

Calibrated x/z measuring points
Calculation of the distance coordinate z and the actual position x along the laser line for each measuring point

Software features

scanCONTROL

Powerful SDKs

- Libraries for C, C++, C# and VB
- LabVIEW driver
- Linux implementation
- Cognex VisionPro

Powerful Software

The scanCONTROL Configuration Tools software offers numerous measuring programs with a total of 94 evaluation variants. This is how all important profile measurement tasks can be set up and combined.

- User-friendly parameter software for all scanCONTROL SMART models
- Analysis and evaluation directly in the sensor

The 3DInspect software is a powerful tool for sensor parameter set up and industrial measurement tasks.

- Compatible with all 3D sensors from Micro-Epsilon
- Intuitive user interface
- Real 3D evaluation
- Object extraction in 3D

Intelligent Tracking

scanCONTROL SMART sensors can be used to track complex structures and to guide robots. Therefore, anchor points are set in the Configuration Tools software which are used to track and measure the profiles.

Profile Correction

With obliquely detected profiles, the Configuration Tools software corrects the inclination and therefore simplifies the sensor alignment.

Measurement areas scanCONTROL

scanCONTROL 2500 and 2900

scanCONTROL laser profile scanners feature a wide range of different measurement areas from 10 x 8 mm up to 600 x 600 mm. Regardless of the size of the measurement area, these laser scanners impress with fast measurements and high precision at the same time.

The variety of measurement areas allows, on the one hand, both the acquisition of smallest details and structures, and, on the other hand, the measurement of large objects with a large offset distance. For this reason, scanCONTROL sensors are used for numerous measurement tasks in various industries.

scanCONTROL 3002 and 3000

Application examples

scanCONTROL

scanCONTROL

Red laser scanners are ideally suited to numerous measurement tasks. A higher light intensity and better performance on weakly reflective or matt surfaces, especially with fast moving objects, make the red laser scanners ideal for common measurement tasks.

Defect recognition on worktops

Filter height measurement for the automotive industry

V-gap measurement on pipes

Gap measurement on car bodies

Profile measurement of the brake disc

Text recognition on the cast part

Tire control

Distance measurement at the center console

Inspection of the adhesive beading

scanCONTROL BL

For profile measurements on red-hot glowing metals as well as transparent and organic surfaces, laser scanners with blue laser line are recommended. While allowing higher stability, the blue laser light does not penetrate the measuring object due to the shorter wavelength of the blue-violet laser. Compared to red lasers, blue laser sensors ensure higher reliability with measurements on red-hot glowing, organic and (semi-)transparent objects.

Razor blade angle

Production of steel-forged rings

Burr measurement on punched sheets

Position of electronic components

Notch position in silicon ingots

Inspection of silicone beads

Completeness of laser welding seams

Thermal tests

Blue Laser patent protection with red-hot glowing and transparent surfaces

Measurements involving blue laser scanners on red-hot glowing objects exceeding 700 °C and (semi-)transparent objects are protected by patent law. Transparent objects include plastics, glass, adhesives, silicones, paints, coatings, Plexiglas and seals. Any questions about Blue Laser scanners? We will be pleased to advise you.

Laser scanner for industrial series applications

scanCONTROL 25x0

Ideal for industrial series applications in production line & automation

Resolution (x-axis) 640 points

High signal stability

Also available with patented Blue Laser Technology

Numerous references worldwide

Compatible with **COGNEX® VisionPro**

Ideal for series applications

scanCONTROL 25x0 laser scanners are designed for industrial measurement tasks. Thanks to their high signal stability, versatility and excellent price-performance ratio, the scanners are particularly suitable for measurement tasks involving large quantities. They measure and evaluate, e.g., angles, steps, gaps, distances and extreme values. Due to their compact design and low weight, these scanners are also suitable for applications with high accelerations, such as on robots.

Available as PROFILE and SMART versions

The scanCONTROL 25x0 series is available as PROFILE and SMART versions. The PROFILE scanners provide calibrated profile data that can be further processed on a PC with software evaluation provided by the customer. SMART scanners operate autonomously and provide selected measurement values. The sensor parameters and the desired measuring programs are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

Ideal for production and machine monitoring

The scanCONTROL 25x0 laser scanners are available with three measuring ranges with red or blue laser. Optional accessories, cable types and interface modules allow a wide range of applications in the production line and in machine building.

Compact design for precise measurements

scanCONTROL 29x0 laser scanners are designed for industrial measurement tasks where compact design and high accuracy are required. Thanks to their high resolution, versatility and excellent price-performance ratio, the scanners are particularly suitable for static and dynamic applications, e.g., on robots. They measure and evaluate, e.g., angles, steps, gaps, distances and extreme values.

Available as PROFILE and SMART versions

The scanCONTROL 29x0 series is available as PROFILE and SMART versions. The PROFILE scanners provide calibrated profile data that can be further processed on a PC with software evaluation provided by the customer. SMART scanners operate autonomously and provide selected measurement values. The sensor parameters and the desired measuring programs are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

Small measuring range with high resolution

With a laser line of just 10 mm, the scanCONTROL 29x0-10/BL models recognize the finest of details and structures. The high profile resolution combined with the blue laser line allow for maximum precision in versatile applications, e.g., monitoring in electronics production.

For small and large measuring ranges

Also available with patented Blue Laser Technology

Compatible with **COGNEX® VisionPro**

Precise 2D/3D profile measurements

The new LLT30x2 laser profile scanners provide calibrated profile data with up to 7.9 million points per second. They allow profile frequencies up to 10 kHz and resolutions up to 1,024 points. Thanks to their high accuracy and versatility, the scanners are particularly suitable for static and dynamic applications as well as robotic applications. They measure and evaluate, e. g., angles, steps, gaps, distances, and circles.

Available as PROFILE and SMART versions

The scanCONTROL 30x2 series is available as PROFILE and SMART versions. The PROFILE scanners provide calibrated profile data that can be further processed on a PC with software evaluation provided by the customer. The 3DInspect software allows for the scanCONTROL sensors to be used also for 3D evaluations.

SMART scanners operate autonomously and provide selected measurement values. The scanCONTROL 30x2 series supports all SMART functions and programs that are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

Accessories from page 42

The easy way of machine integration

The design of the LLT30x2 series is compact and lightweight. The controller is integrated in the sensor itself, which simplifies mechanical integration. The measurement data can be output directly.

NEW

Large measurement area up to 600 x 600 mm

The scanCONTROL 30x2 laser scanners are now also available with a large measuring field up to 600 x 600 mm. This allows large measuring objects to be detected with high accuracy.

Application examples

Assembly monitoring of car body shell construction

Detection of the road surface profile

Geometry inspection in metals processing

Powerful 2D/3D laser scanners

¹⁾ Based on the measuring range; measuring object: Micro-Epsilon standard object

²⁾ According to a one-time averaging over the measuring field (1,024 points)

³⁾ RS422 interface, programmable either as serial interface or as input for triggering/synchronization

⁴⁾ Only with 2D/3D Output Unit

⁵⁾ Only with 2D/3D Gateway

Powerful 2D/3D laser scanners with highest precision

scanCONTROL 30x0

High resolution in x- and z-axis for accurate profile measurement

Profile frequency up to 10 kHz for monitoring of dynamic processes

Innovative exposure control

For small and large measuring ranges

Also available with patented Blue Laser Technology

Compatible with **COGNEX® VisionPro**

Fast and precise 2D/3D profile measurements

The new LLT30x0 laser profile scanners provide calibrated profile data with up to 9.6 million points per second. Thanks to their high accuracy, high profile frequency and versatility, these powerful scanners are suitable for demanding measurement tasks. They measure and evaluate, e.g., angles, steps, gaps, distances and circles with high precision. These sensors also offer predefined operating modes that enable optimal results for various applications.

Article designation

LLT	30	x0	-25	/SI	
Options - see below					
Measuring range 25 mm 50 mm 100 mm 200 mm 430 mm 600 mm					
Class 00 = PROFILE 10 = SMART					
Series LLT30xx					

Available as PROFILE and SMART versions

The scanCONTROL 30x0 series is available as PROFILE and SMART versions. The PROFILE scanners provide calibrated profile data that can be further processed on a PC with software evaluation provided by the customer. The 3DInspect software allows for the scanCONTROL sensors to be used also for 3D evaluations.

SMART scanners operate autonomously and provide selected measurement values. The scanCONTROL 30x0 series supports all SMART functions and programs that are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

Laser options*

	/SI	Hardware switch-off of the laser line
	/3R	Increased laser power (class 3R) e.g., for dark surfaces
	/BL	Blue laser line (405 nm) for (semi-) transparent, red-hot glowing and organic materials (Measuring ranges 25 - 100 mm)

Cable outlet options*

	/RT	Cable outlet on the rear side ("Rear Tail") for space-saving installation, cable length 0.3 m. Sockets at cable end (Measuring ranges 25 - 200 mm)
	/PT	Cable directly out of the sensor ("Pigtail") Available lengths: 0.3 / 0.6 / 1.00 m

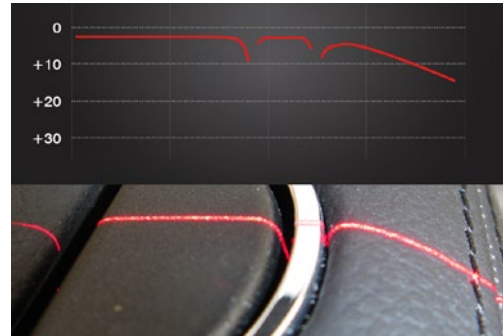

*Options can be combined

Accessories from page 42

Innovative exposure control to master difficult surfaces

On inhomogeneous or dark surfaces, the HDR (High Dynamic Range) data acquisition mode and the improved auto exposure optimizes the measurement results.

In HDR mode, the rows of the sensor matrix are exposed differently but at the same time which avoids time offsets between the recordings. This is how moving objects can be detected reliably. The areas for auto exposure can be selected individually.

High resolution

High dynamic range

High speed

Fast measurement results with operation modes

Choose from three predefined operating modes for your specific measurement task: "High-Resolution" for maximum precision, "High Dynamic Range" for optimal profile detection on difficult surfaces and "High Speed" for ultra-fast measurements.

NEW

Large measurement area up to 600 x 600 mm

The scanCONTROL 30x2 laser scanners are now also available with a large measuring field up to 600 x 600 mm. This allows large measuring objects to be detected with high accuracy.

Application examples

Planarity of coated battery film

Assembly monitoring of battery packs

Inline 3D inspection of tire geometry

High performance laser scanner

Software

scanCONTROL Configuration Tools

Plug & Play solution for complex measurement tasks

Evaluation directly in the sensor without external controller

Parallel execution of different measurement tasks and multiple evaluation

Easy online and offline analysis

scanCONTROL SMART sensors have an integrated intelligent controller for easy profile evaluation without requiring an additional PC. Configuration and parameter setup of the sensor is via the scanCONTROL Configuration Tools software. It enables sensor setup, viewing of profiles, as well as saving, loading and exporting profiles. All software functions can also be executed without a sensor in order to test the measurement task offline for very fast processes.

[micro-epsilon.com/
 2D_3D/laser-scanner/
 Software/downloads/](http://micro-epsilon.com/2D_3D/laser-scanner/Software/downloads/)

Easy 5-Step Configuration

1.

Alignment of the sensor

2.

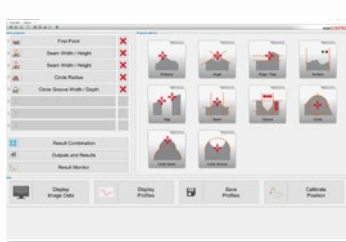

Configuring the sensor

The software enables the user to completely configure the scanner in just five simple steps. After configuration, the scanner is in standalone mode and transmits the measured values to a PLC.

3.

Selection of measurement programs

4.

Configuring the measurement programs

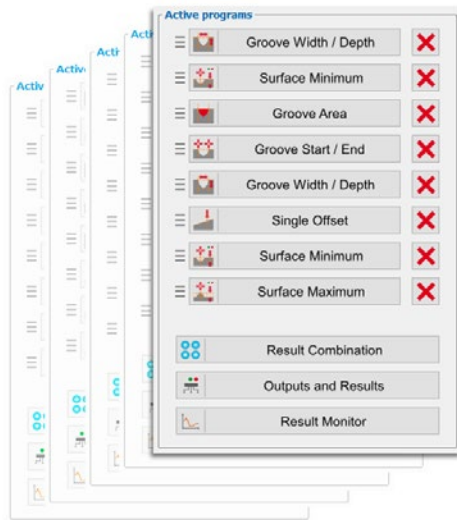

5.

Output and display of measured values

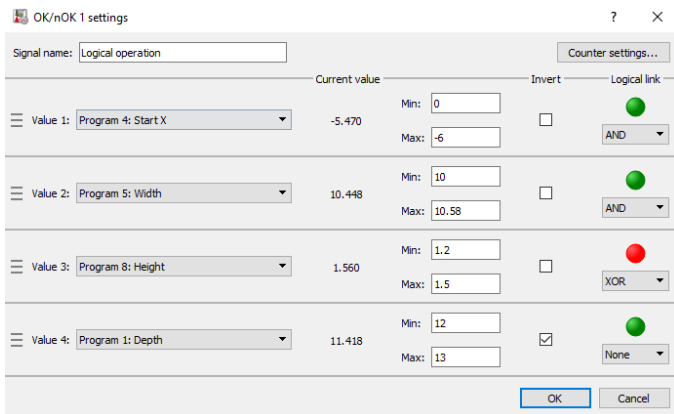

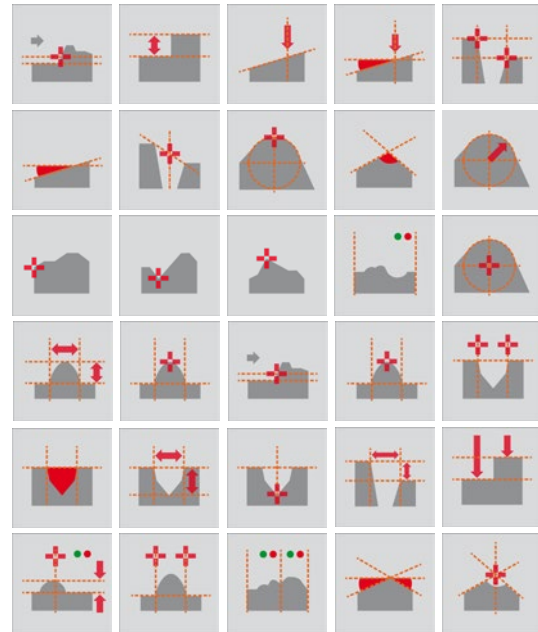

Numerous Setting Options

- 16 measuring programs + 8 evaluations per parameter set
- 15 independent parameter packages can be stored in the sensor
- Unlimited memory for parameter sets on the computer

Wide Range of Measurement Tools

Logical Links

- Combined query of different conditions
- Summarized result evaluation in the sensor as OK/NOK

scanCONTROL Result Monitor

Result Monitor is a new software tool for displaying measured values of up to 4 SMART sensors.

- Display of profile and measured value history
- Different views, e.g., for workers
- Parallel transmission of the measured values to the control unit is possible and recommended
- Ring buffer logging and memory
- Adjustable layout

Software 3DInspect

Intuitive user interface

Real 3D evaluation, not just 2.5D

Object extraction in 3D

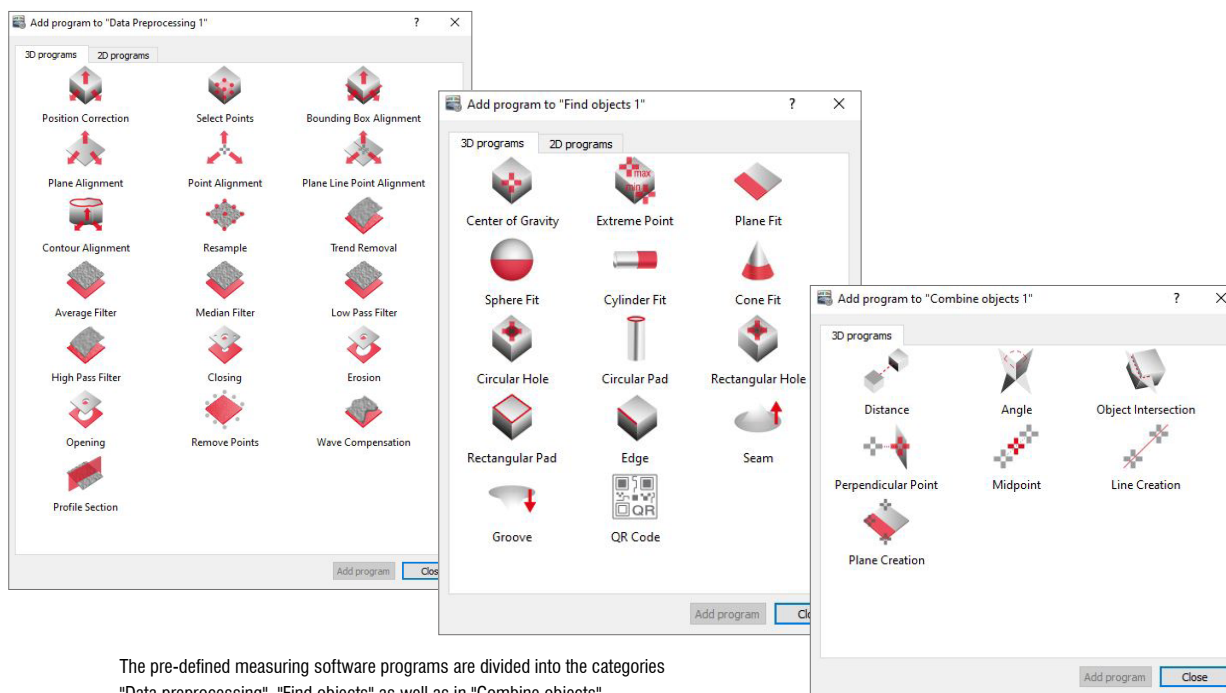

Direct feedback with algorithms

Compatible with all 3D sensors
from Micro-Epsilon

3DInspect software for 3D measurement and inspection tasks

The 3DInspect software is a powerful tool for sensor parameter set up and industrial measurement tasks. This software transmits the measurement data from the sensor via Ethernet and provides the data in three-dimensional form. This 3D data is further processed, evaluated and assessed with 3DInspect measuring programs on the PC and, if necessary, logged and transmitted via Ethernet to a control unit. Furthermore, the software enables the storage of 3D data. In addition to the scanCONTROL 30xx models, the 3DInspect software is also supported by the 3D Profile Unit as well as the surfaceCONTROL and reflectCONTROL sensors.

**Industrial Performance Unit:
Industrial PC with GigE Vision Sensors**

The Industrial Performance Unit is a powerful computing platform for 3D applications. The scanner can be parameterized directly via the 3DInspect software, allowing measurements to be started immediately. Results can be output via the integrated PROFINET, EtherCAT and EtherNet/IP interfaces.

Valid3D technology from Micro-Epsilon vs. conventional 2.5D systems

The unique Valid3D technology enables lossless display and processing of the point clouds. This is how scanned 3D objects can be moved arbitrarily in the coordinate system.

Valid3D: Real 3D without data loss

Point cloud after turn

- 3DInspect with Valid3D**
- Real 3D image of test object without data loss
 - Analysis and evaluation of complete test object

- Common 3D software**
- Algorithms based on 2.5D
 - Only one z-coordinate per x/y coordinate possible
 - Data loss during data processing

Integration of LLT sensors scanCONTROL

The scanCONTROL PROFILE sensors detect one profile from individual, calibrated points per measurement. Users can transfer these profiles to their own applications either individually or combined as an array/matrix in a container set. In addition to the data transfer of individual measuring points and their additional information (e.g. intensity, counter reading) the entire configuration of the sensor can also be controlled from its own application software. Micro-Epsilon provides a number of interfaces to access the parameter and data transfer functions. The transmission interface primarily used by scanCONTROL sensors for communications and profile transfer is Ethernet.

Ethernet and GigE Vision

Each scanCONTROL sensor complies with the GigE Vision Standard (Gigabit Ethernet for Machine Vision) of the AIA (Automated Imaging Association).

The standard is widely used in the image processing industry and is therefore supported by all conventional computer vision tools. This ensures fast and smooth integration into different image processing tools – also for 3D evaluation.

The GigE Vision standard stands for optimal data security, perfect performance and short implementation times. GigE Vision is based on Gigabit Ethernet and thus offers a high data transfer rate. Ethernet technology offers advantages such as long cable lengths without using repeaters/hubs, and it permits the use of inexpensive network components. The GigE Vision standard provides an open framework for data transmission (e.g. profiles, data sets) and control signals between the laser scanner and a PC. There are numerous infrastructure topology options for single- and multi-scanner applications.

scanCONTROL-Integration/](http://micro-epsilon.com/2D_3D/laser-scanner/Software/scanCONTROL-Integration/)

Profile acquisition

Grayscale image

Image processing software

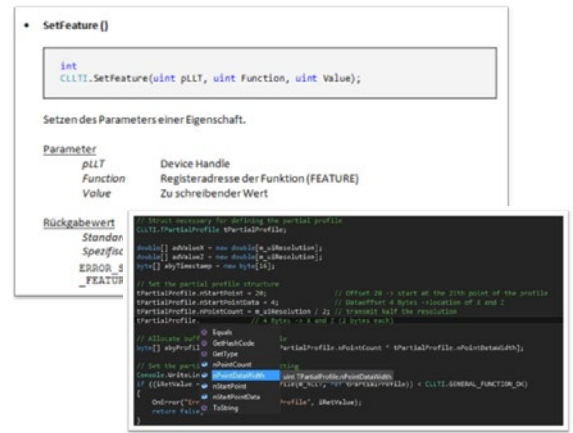

Integration with the C/C++ library

The C/C++ library for scanCONTROL supports both static and dynamic loading. Both stdcall and cdecl are supported as calling conventions. The individual functions of the library are clearly documented in the interface description and explained using examples.

The scanCONTROL SDK integration package includes:

- LLT.DLL library file
- Interfaces and scanCONTROL documentation
- Numerous programming examples for C++, Python, C# and Visual Basic (e.g. trigger, container mode)

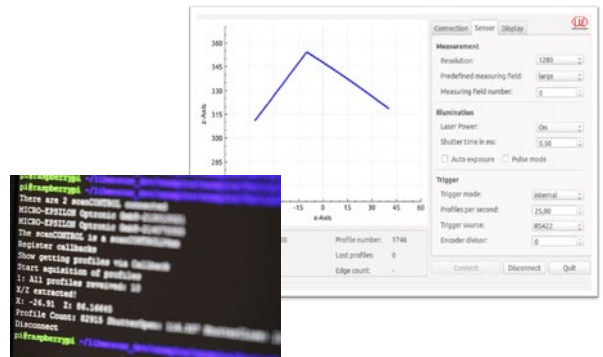

The scanCONTROL Developer Tool demo program offers a complete integration example based on C++ for quick testing of the sensor configuration.

Integration with Linux

The integration into Linux is performed using an Open Source C library which has been extended with some important control features for scanCONTROL. An additional C++ library enables fast sensor integration of the entire functionality into a user-friendly API.

This library is based on the GeniCam standard which is why the sensor can be controlled via GeniCam commands or directly with the control parameters listed in the documentation. For integration support, some example programs are available (e.g. trigger, container mode). Use on ARM embedded PCs (e.g. Raspberry Pi) is possible with restrictions.

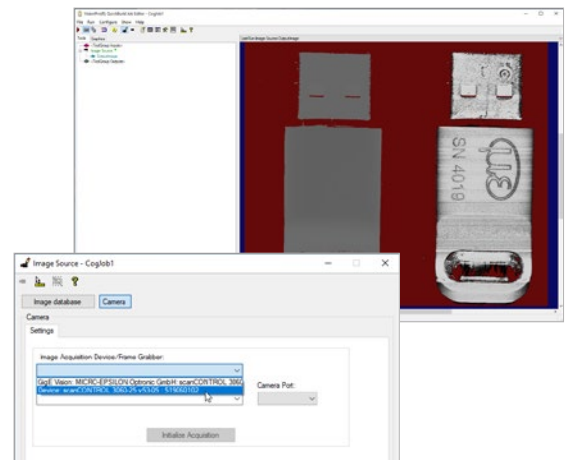

Integration with Cognex VisionPro

The scanCONTROL AIK adapter enables fast integration into Cognex VisionPro via the Cognex AIK Server. It combines the advantages of the Cognex VisionPro environment to generate fast and reliable measurement solutions with the advantages of native scanCONTROL integration.

Cognex Integrators and users of Cognex VisionPro can use the adapter to generate Cognex Range Images out of scanCONTROL's measurement points to process it comfortably with the VisionPro data evaluation algorithms for Range Images. Beyond that, all well-known configuration options for scanCONTROL sensors are available to the user.

To get a quick start, the scanCONTROL AIK adapter for Cognex VisionPro comprises an elaborate documentation on all sensor settings and the necessary configuration steps in Cognex VisionPro.

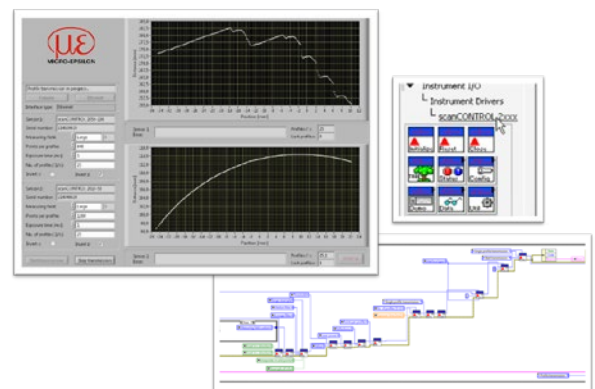

COGNEX® VisionPro

Integration with LabVIEW

The LabVIEW scanCONTROL instrument driver supports fast integration of scanCONTROL sensors into the LabVIEW application environment. For accessing a scanCONTROL sensor and its basic settings, users can drag-and-drop modules directly from the function palette into their VIs. Example VIs illustrating the scanCONTROL integration are also part of this package.

The integration of scanCONTROL sensors into the LabVIEW environment is based on the C/C++ library (LLT.DLL) of Micro-Epsilon. The documentation also shows how to set up additional special sensor parameters.

Profile stitching for up to 8 sensors 3D Profile Unit

NEW

Profile stitching for up to 8 laser scanners

Integration in GigE Vision as raw data provider

Industrial Ethernet connection for control
and transmission of measured values

Evaluation of composite 2D sections or 3D
point clouds

Compatible with scanCONTROL 30xx

The 3D Profile Unit enables the calculation of several individual profiles of scanCONTROL 30xx sensors in a common coordinate system. This is how a composite 2D profile or a composite 3D point cloud can be generated. This enables the detection of various geometries, the extension of measuring ranges and the performance of thickness measurements.

The evaluation of the data and the parameterization of the system can be implemented in the 3DInspect software. The 3D-Profile-Unit controller offers an optional integrated evaluation feature in conjunction with the Industrial Ethernet connection, enabling the application to be controlled and measured values to be output to a PLC.

Alternatively, the 3D-Profile-Unit controller can also be integrated into common image processing programs via GigE Vision and acts as a raw data provider.

3D-Profile-Unit Controller

- Communication with any GigE Vision clients
- Direct integration into image processing software
- Transfer of profile data or 3D point clouds

3D-Profile-Unit Controller with Industrial Ethernet

- Integrated evaluation
- Transmission of measured values
- Industrial Ethernet interface for control and transmission of measured values

Application examples:

Volume measurement of food

Width, thickness and Heavy Edge of battery film

Thickness of smartphone carrier plates

Inspection of pouch cells

Accessories

scanCONTROL

2D/3D Gateway

PROFINET / EtherCAT / EtherNet/IP for all SMART scanners

One 2D/3D Gateway is connectable with up to 4 sensors. Operation of more than one sensor requires a switch. The 2D/3D Gateway communicates with the scanCONTROL SMART sensor via Ethernet Modbus. The resultant values are then converted to PROFINET, EtherCAT or EtherNet/IP. The customer carries out the parameter setup with a detailed instruction manual. The gateway can also be parameterized in advance at the factory.

Models

6414142	2D/3D Gateway	Fieldbus coupler, configurable for PROFINET, EtherNet/IP and EtherCAT
6414142.001	2D/3D Gateway, pre-parameterized	Pre-parameterized to customer log and IP addresses

Number of sensors on the gateway	Maximum measurement frequency
1	500 Hz
2	500 Hz
3	330 Hz
4	250 Hz

NEW

Higher measurement frequencies are also possible with the 30xx sensors due to the Modbus bundling option.

2D/3D Output Unit

Analog signals / digital switch signals for all **SMART** scanners

The 2D/3D Output Unit is addressed via Ethernet and outputs analog and digital signals. Different output terminals can be connected to the fieldbus coupler.

Models

6414073	2D/3D Output Unit Basic/ET	Fieldbus coupler with filter module and bus end terminal
0325131	OU-DigitalOut/8-channel/DC24V/0.5A/negative	8-channel digital output terminal; DC 24 V; 0.5 A; negative switching
0325115	OU-DigitalOut/8-channel/DC24V/0.5A/positive	8-channel digital output terminal; DC 24 V; 0.5 A; positive switching
0325116	OU-AnalogOut/4-channel/ ± 10 V	4-channel analog output terminal; ± 10 V
0325135	OU-AnalogOut/4-channel/0-10 V	4-channel analog output terminal; 0-10 V
0325132	OU-AnalogOut/4-channel/0-20 mA	4-channel analog output terminal; 0-20 mA
0325133	OU-AnalogOut/4-channel/4-20 mA	4-channel analog output terminal; 4-20 mA

Other terminals available on request.

Measuring stand with sensor adapter board, flexible rod and clamp base

3D snapshot sensors for the inspection of shapes and surfaces

surfaceCONTROL 3D 3500

Innovative 3D snapshot sensor for inline inspection of geometry, shapes and surfaces

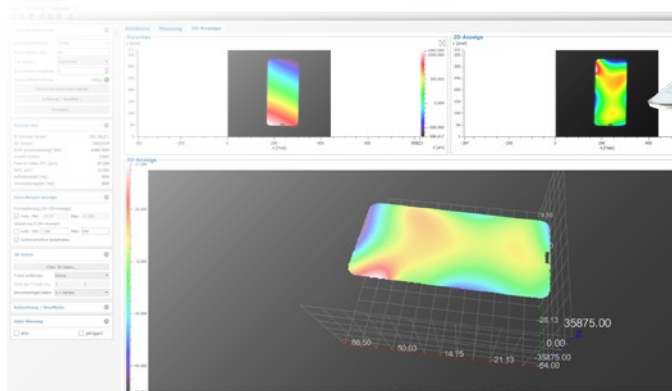

- Highest repeatability up to $0.25 \mu\text{m}$
- Best Z-axis resolution from $0.7 \mu\text{m}$
- Up to 2.2 million 3D points / second
- Easy integration in all common 3D image processing packets

reflectCONTROL

3D inline inspection of shiny surfaces: flat glass, mirrors and wafers

- Complete inspection of reflecting and shiny surfaces
- Highest z-accuracy $< 1 \mu\text{m}$
- Fastest 3D inspection $< 1 \text{ s}$
- High compatibility via different interfaces

Sensors and Systems from Micro-Epsilon

Sensors and systems for displacement, distance and position

Sensors and measurement devices for non-contact temperature measurement

Measuring and inspection systems for metal strips, plastics and rubber

Optical micrometers and fiber optics, measuring and test amplifiers

Color recognition sensors, LED analyzers and inline color spectrometers

3D measurement technology for dimensional testing and surface inspection
